Neurotrophins

- Nerve Growth Factor
- Brain-Derived Neurotrophic Factor
- Neurotrophin-3
- Neurotrophin-4/5
- Neurotrophin-6
- Neurotrophin-7
- Ciliary Neurotrophic Factor
- Glia Maturation Factor
- Glial Cell Line-Derived Neurotrophic Factors
- Neuregulins (NRG-1, 2, 3 and 4)
- Pituitary Adenylate Cyclase-Activating Polypeptide

BDNF

Fattore neurotrofico cerebrale

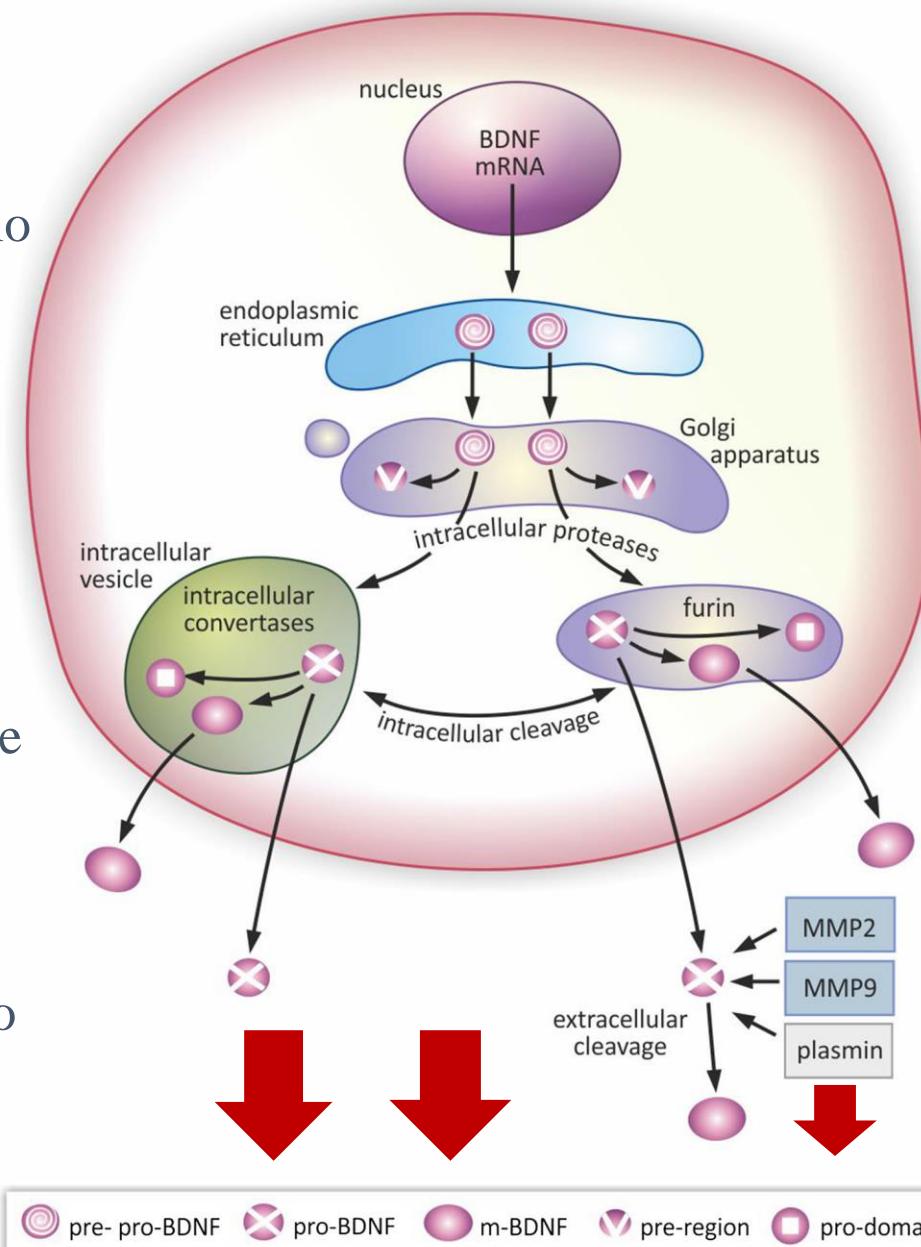

Il fattore neurotrofico cerebrale, o BDNF (da Brain-Derived Neurotrophic Factor), è un polipeptide presente nel cervello dei mammiferi, appartenente alla famiglia delle neurotrofine. BDNF maturo è una proteina costituita da **119 aminoacidi**, massa molare di 14 KDa , il gene è localizzato nel **cromosoma 11, banda p 13**

RUOLI FISIOLOGICI DEL BDNF

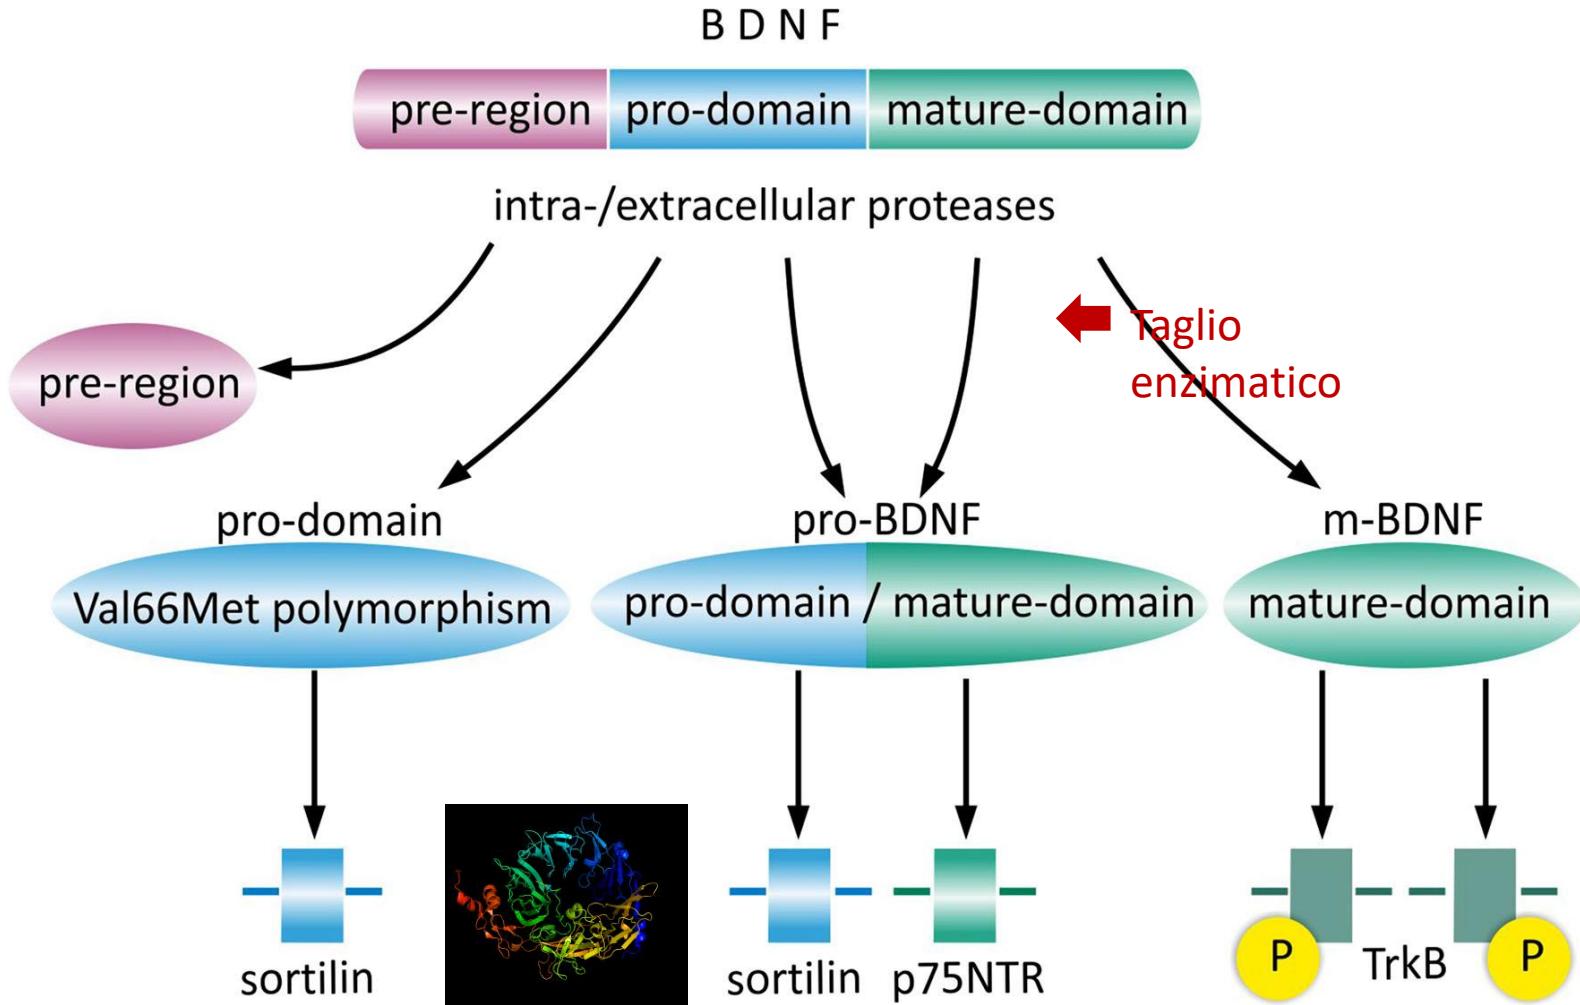

Il Brain-Derived Neurotrophic Factor (BDNF) è una delle neurotrofine del cervello dei mammiferi più studiate e, tra le sue funzioni, tre sono particolarmente importanti per i meccanismi **cognitivi** e di **memoria**:

- Controllo dello sviluppo neuronale e della glia
- Neuro-protezione
- Modulazione delle interazioni sinaptiche sia a breve che lungo termine

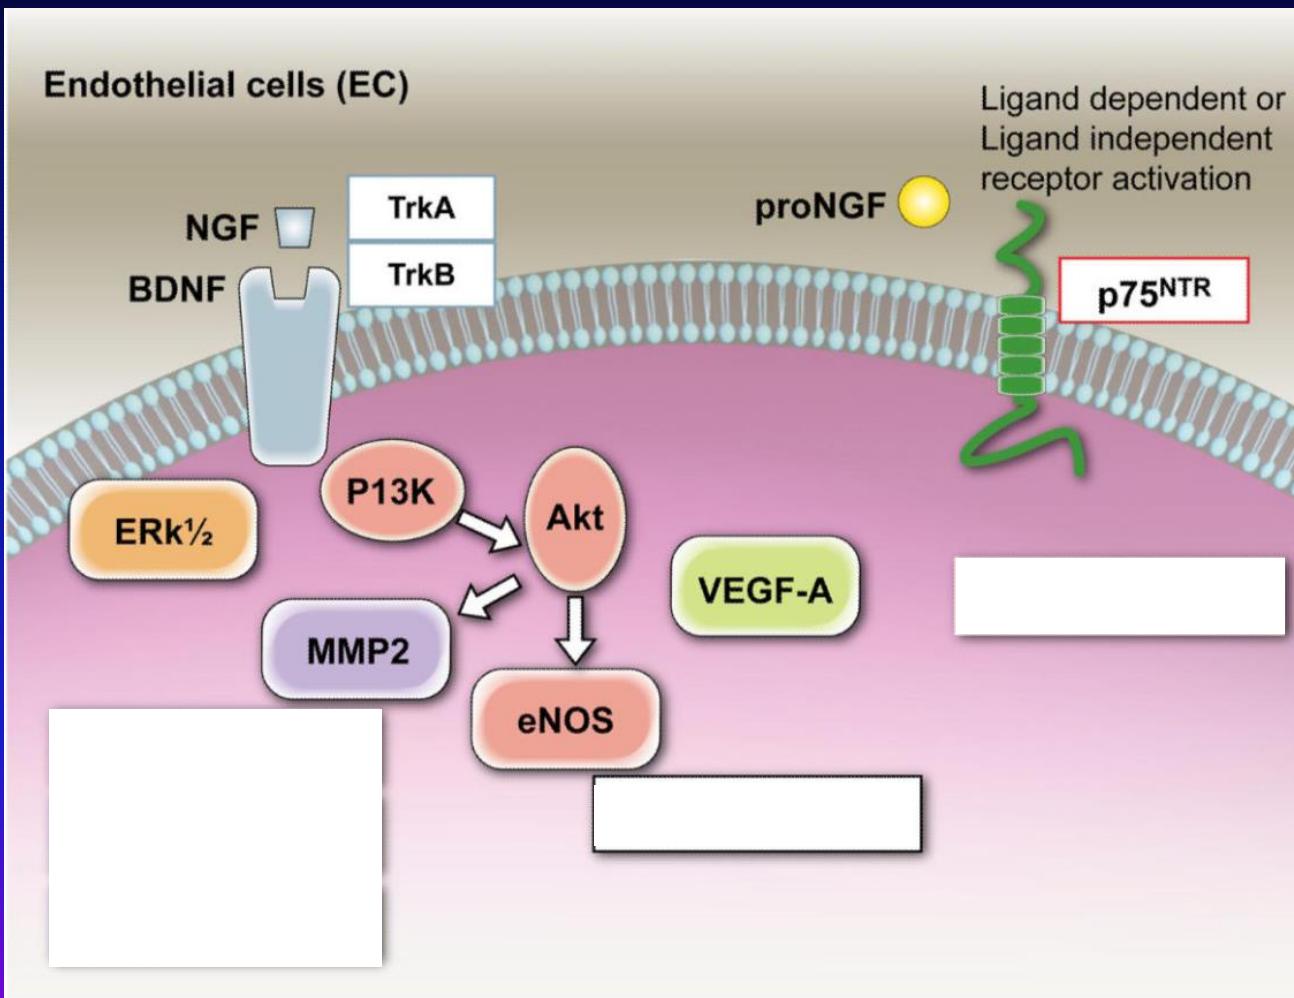

Il BDNF viene sintetizzato attraverso un processo complesso, che genera un numero di isoforme attive in grado di regolare più cascate di segnale

Processi di maturazione del BDNF

Neurotrophin actions on the endothelial cells

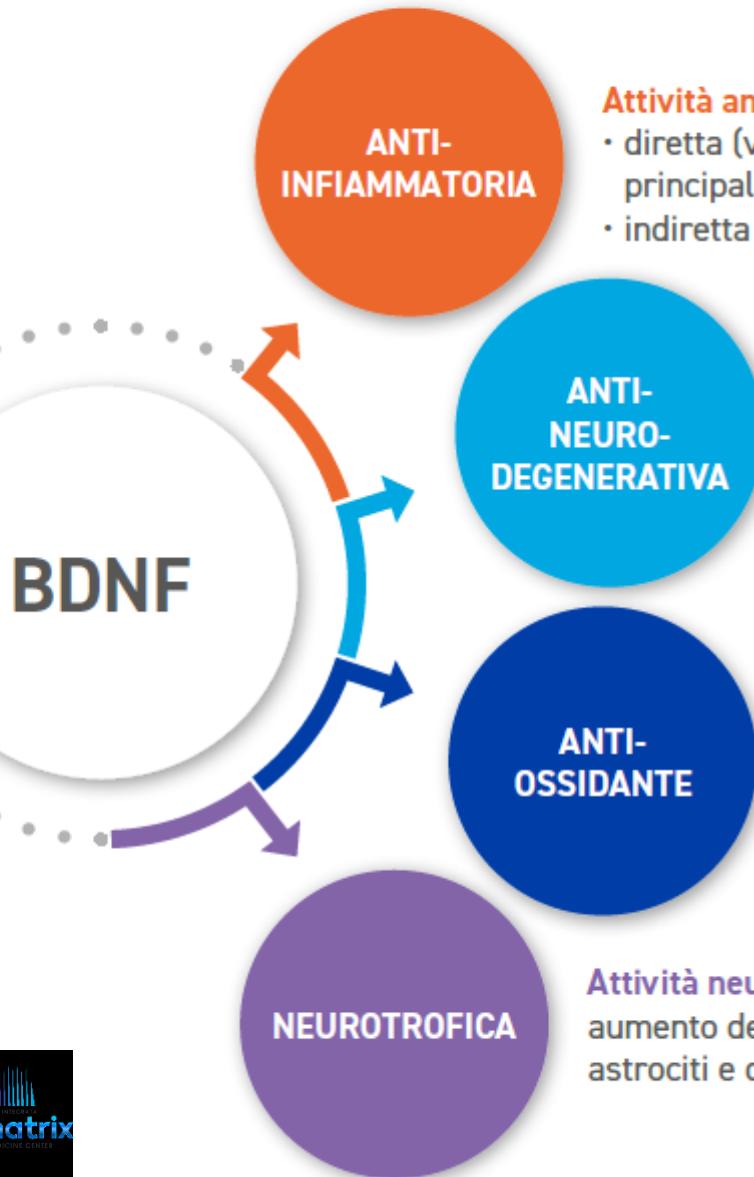

Università degli Studi Guglielmo Marconi

Centro Studi Scienze della Vita

Attività antinfiammatoria

- diretta (via down-regolazione di NF- κ B e quindi dei principali mediatori citochinici dell'infiammazione)
- indiretta (via up-regolazione di IL-10)

Attività anti-neurodegenerativa

freno della formazione dei "gomitoli" di proteina TAU fosforilata che interferiscono sulla comunicazione inter-neuronale

Azione antiossidante

aumento dell'espressione dei geni codificanti per sistemi enzimatici scavengers quali superossido dismutasi (SOD) e glutathione ossidasi (GPx)

Attività neurotrofica

aumento della vitalità dei neuroni corticali e degli astrociti e di quest'ultimi anche della sopravvivenza

- Ketosis (beta hydroxybutyrate)
 - Acute intermittent stress
 - Depression
 - Anxiety
- Physical exercise
 - Sunlight exposure

BDNF codifying mRNA
BDNF 1-7 transcription factors

sciences*

Study goal: To demonstrate the effectiveness of low dose SKA BDNF (GUNA-BDNF) in counteracting brain aging induced by oxidative stress

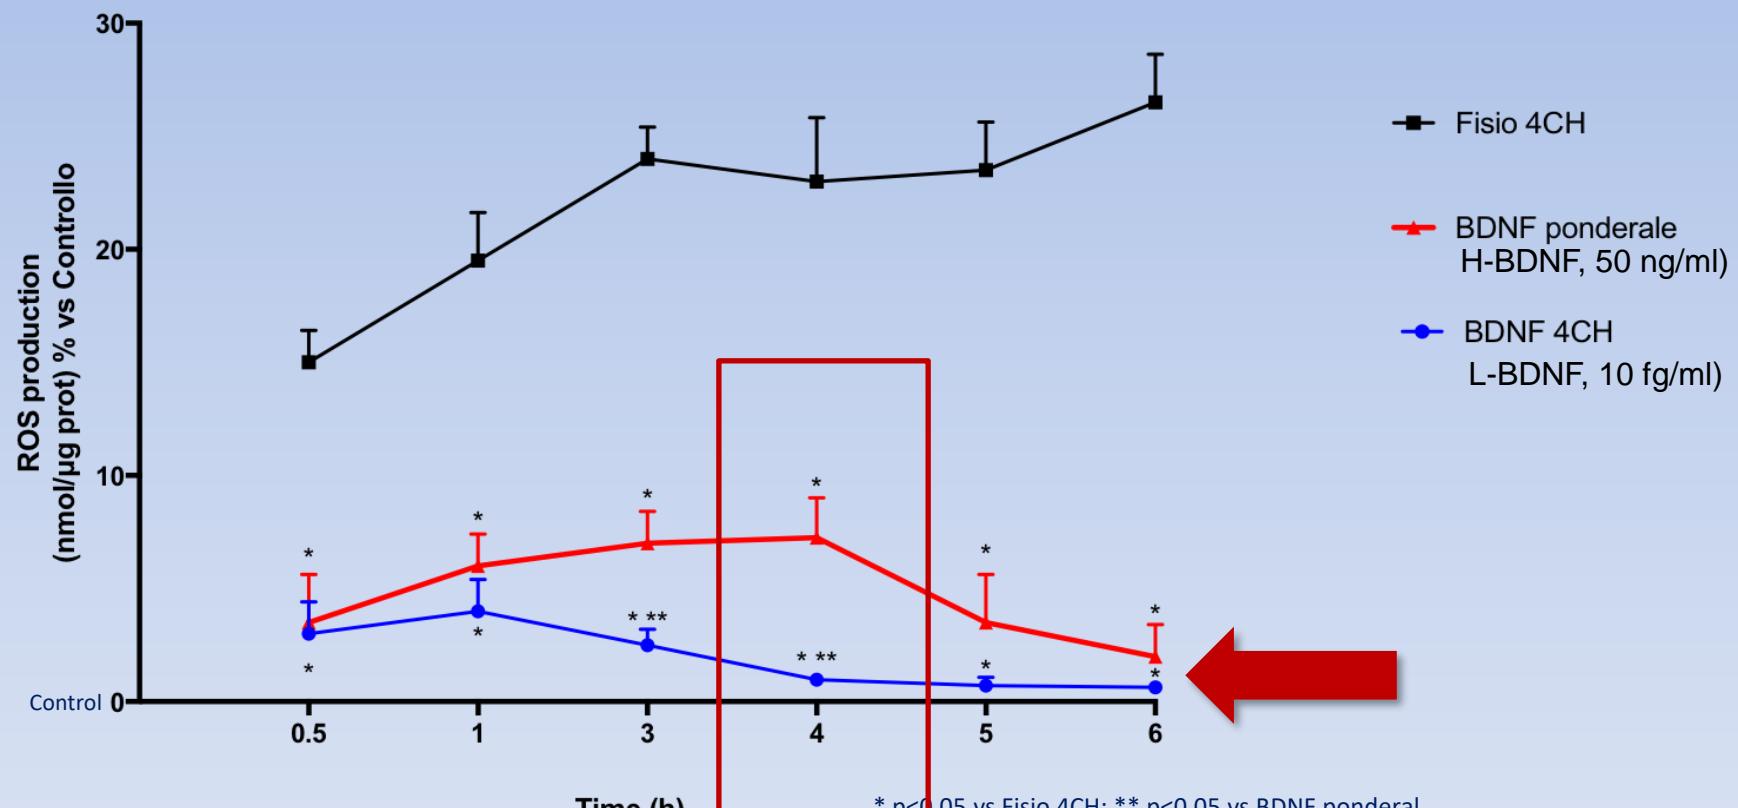

Methods

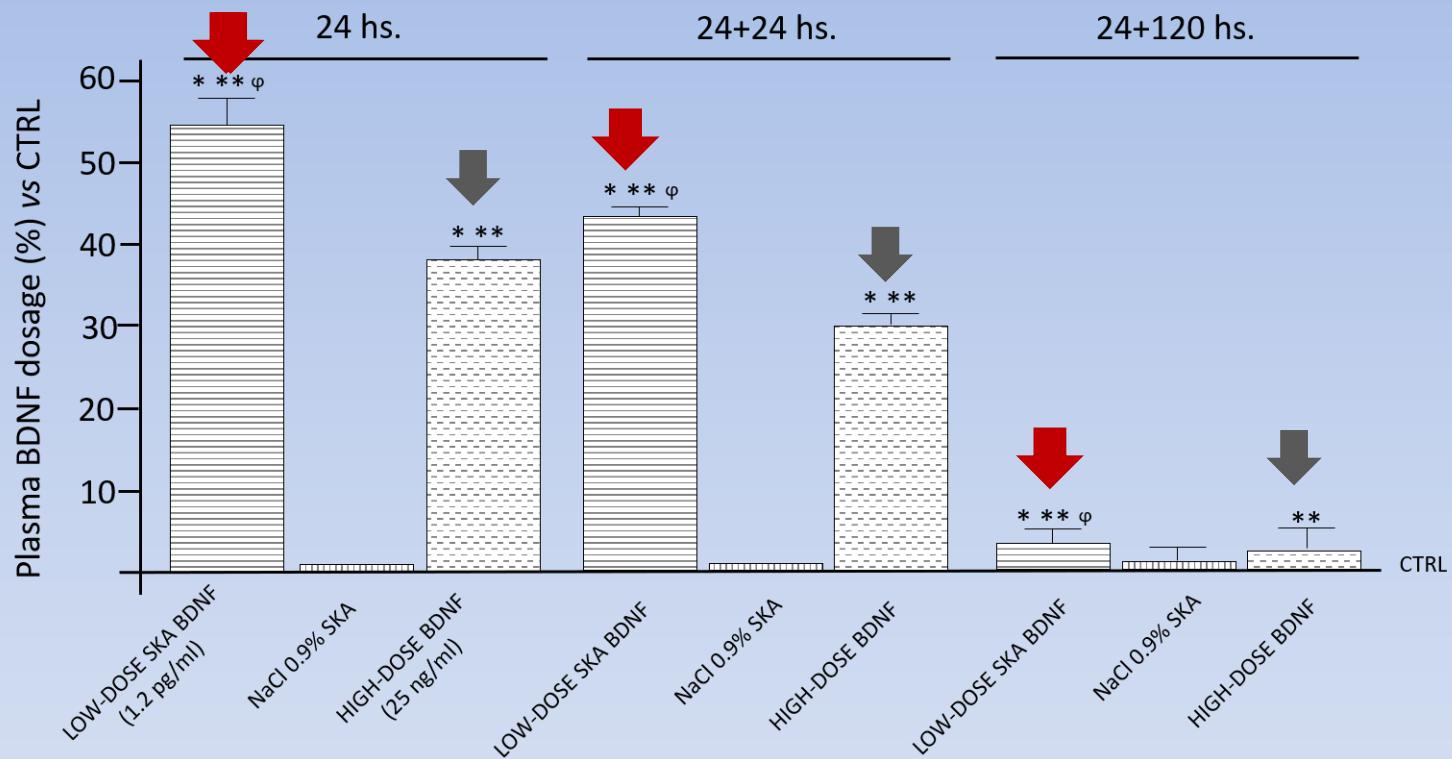

Main outcomes

- ROS REDUCTION
- CELL VIABILITY
- Ability of BDNF low dose to overcome biological barriers

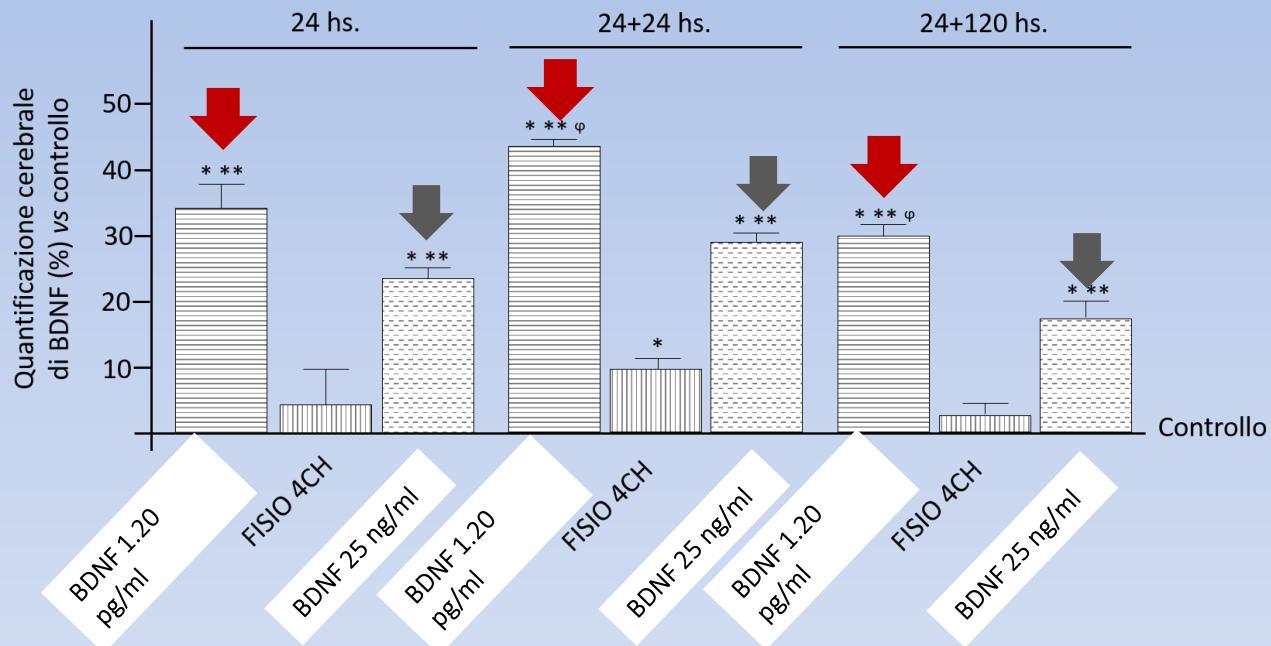

ROS REDUCTION

Plasma BDNF QUANTIFICATION

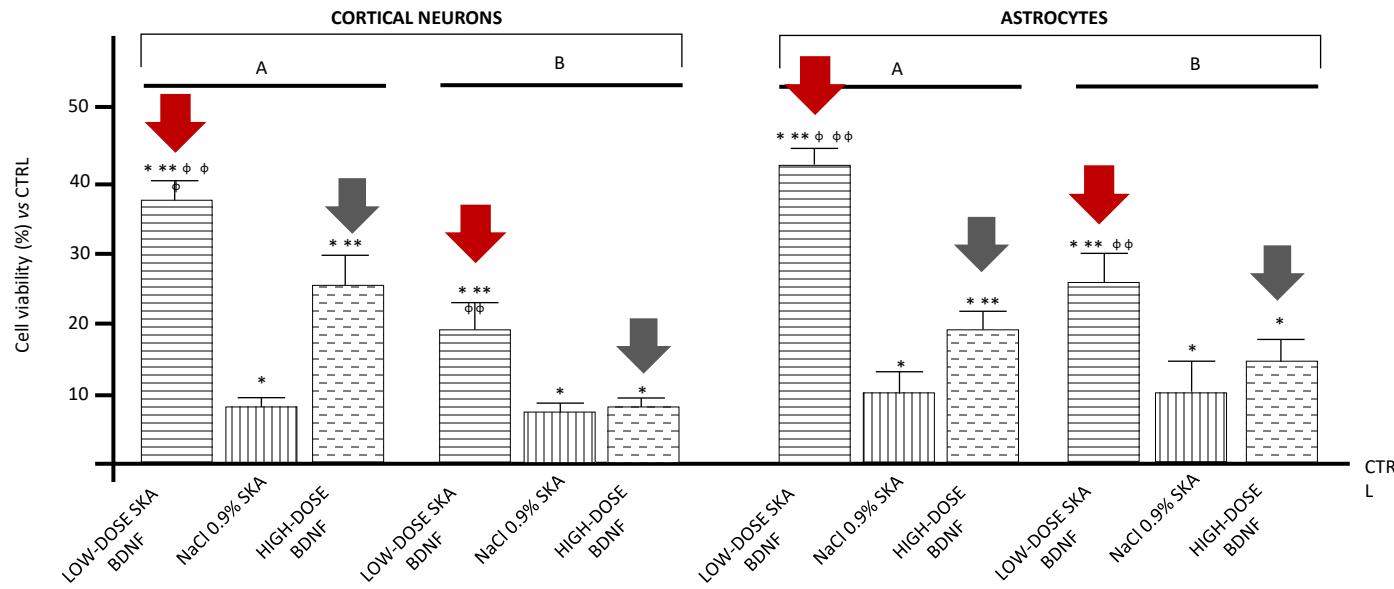

In vivo BRAIN BDNF QUANTIFICATION

12 month old mice type C57BL

CELL VIABILITY

Protocol A

a single cell treatment in 6 days

*p<0.05 vs CTRL; ** p<0.05 vs NaCl 0.9% SKA ; φp<0.05 vs the same treatment in the two protocols;
φφ p<0.05 vs BDNF within the same protocol

Protocol B

1 cell treatment a day for 6 days

Università degli Studi Guglielmo Marconi

Centro Studi Scienze della Vita

Plasma BDNF levels in Heart Failure

242 patients with HF

80 subjects without HF.

Plasma BDNF levels in patients

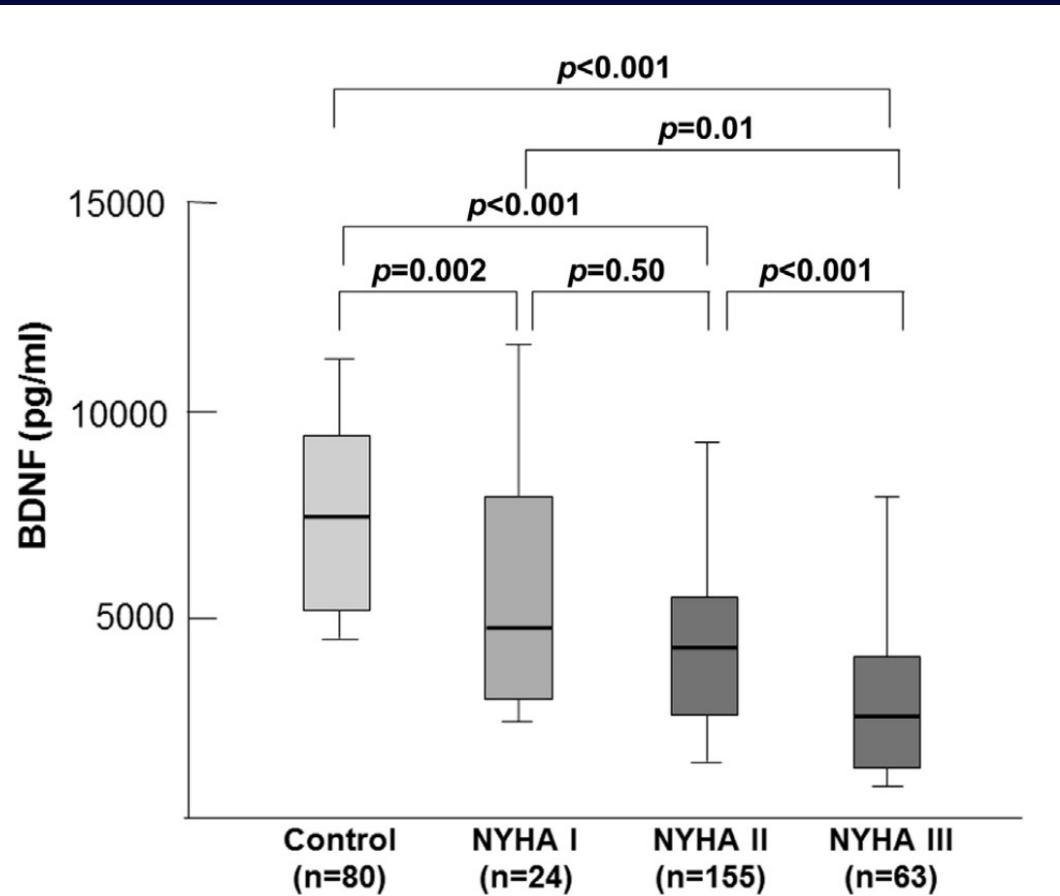

with HF 3,712 pg/ml

without HF 7,247 pg/ml

p <0.001.

Lower in patients with HF with
the NYHA class III
than class I p 0.01 and
class II p <0.001.

Log BDNF levels correlated
negatively with log B-type
natriuretic peptide

Am J Cardiol 2015;116:243e249

BDNF and Left Atrial Diameter

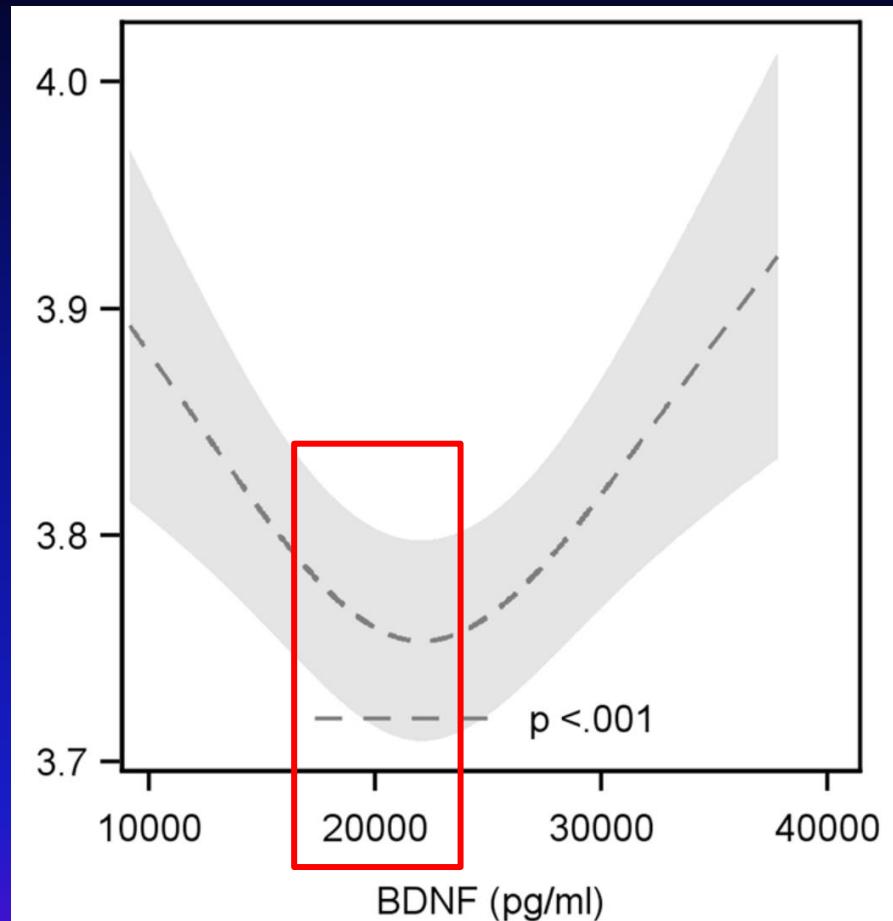

Subjects with a **BDNF** concentration around **20,000 pg/ml** had the **smallest left atrial diameter**.

An inverse association below this concentration.

Low BDNF was related with a large lef atrial diameter.

For concentrations higher than 20,000 pg/ml a positive association was found.

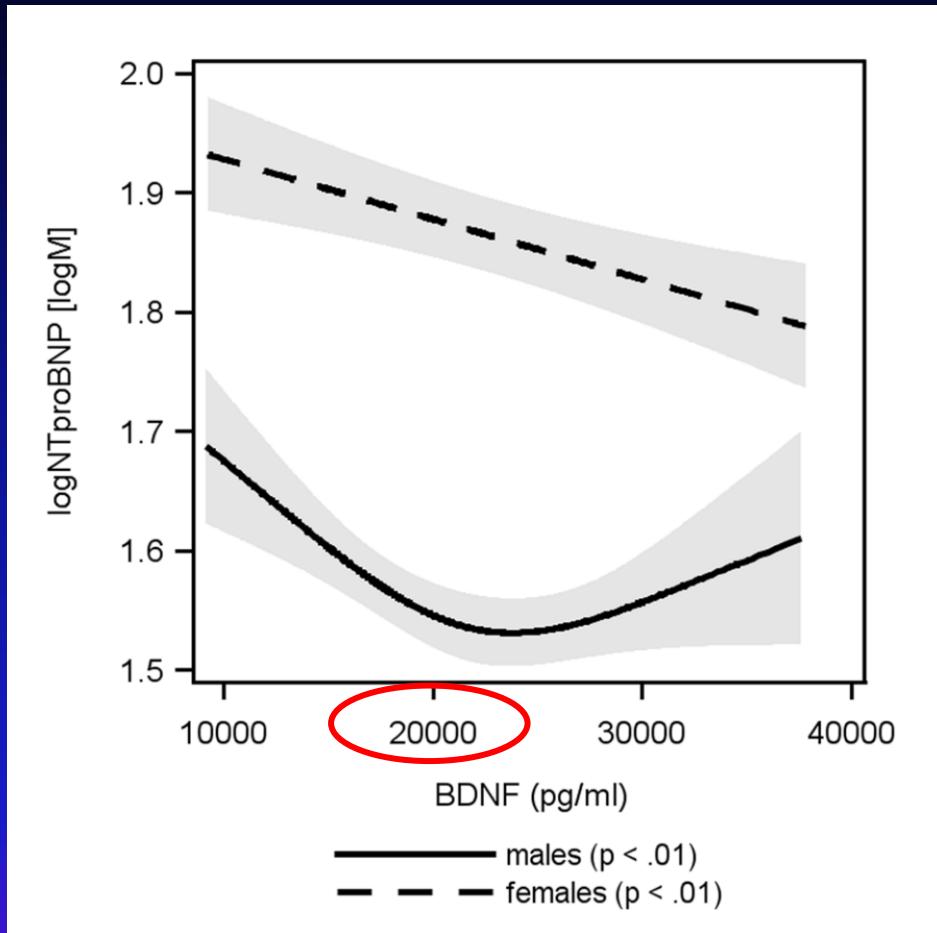

Thus, **high levels of BDNF were also related to larger lef atrial diameters.**

Brain-derived neurotrophic factor is related with adverse cardiac remodeling and high ntnproBnp

Durata media mensile degli eventi di Fibrillazione Atriale – fasce di età

Conclusion

The prevention of PAF episodes remains still a challenging issue in cardiovascular medicine. The administration of BDNF, could represent a promising and natural tool against PAF. This study shows that:

- BDNF low dose may have an impacting role in reducing or eliminating the arrhythmic burden in patients with PAF
- This holds true especially in patients aged 70 or more, without structural heart disease and under optimal medical treatment.
