Pneumococco e herpes zoster, due nemici contro cui difendersi

Gli over 65 possono avere complicanze pesanti a cuore e polmoni, soprattutto in caso di malattie pregresse

Vaccinarsi non solo contro il Covid, che è fondamentale, ma anche per difendersi da influenza, polmonite pneumococcica e herpes zoster. Questa la raccomandazione di Italia Longeva, associazione nazionale per l'invecchiamento e la longevità attiva, attraverso la campagna di comunicazione sociale #MiVaccinoMiDifendo, per ricordare che contro le principali malattie infettive sono disponibili vaccini efficaci, sicuri e gratuiti. L'iniziativa, presentata al Ministero della Salute, ha ottenuto il patrocinio di Fondazione Pubblicità Progresso e delle società scientifiche di Igiene (SItI), Geriatria (SIGG) e Medicina Generale (SI-

MG). Lo spot #MiVaccinoMiDifendo (consultabile sul sito www.italialongeva.it) ci ricorda che in Italia, ogni anno, l'influenza colpisce tra il 4% e il 15% della popolazione (e fino al 40-50% dei soggetti a rischio), risultando, insieme con la polmonite, una delle dieci principali cause di morte. Per gli over-65, la polmonite da pneumococco risulta avere una letalità del 20-40%. Insidioso e potenzialmente invalidante anche l'herpes zoster (o Fuoco di Sant'Antonio), malattia causata dalla riattivazione

IL CONSIGLIO DEI MEDICI
Non va dimenticato il richiamo contro tetano, difterite e pertosse, da fare ogni dieci anni

del virus della varicella, che si manifesta principalmente dopo i 50 anni, provocando, in oltre il 20% dei casi, una condizione molto dolorosa nota come nevralgia post-erpetica. «I vaccini sono l'armatura che ci protegge dagli attacchi di nemici particolarmente temibili - ha commentato Roberto Bernabei, presidente di Italia Longeva - consente di evitare morti, che per il 90% riguardano gli anziani, e di non sovraccaricare gli ospedali, a beneficio dell'intera collettività».

Una strada per aumentare le coperture per l'influenza, e al contempo rafforzare l'immunizzazione da Covid-19 mediante la terza dose, è quella della somministrazione contemporanea dei due vaccini a beneficio dei soggetti fragili. È inoltre importante ricordare la disponibilità delle

vaccinazioni contro la polmonite da pneumococco e l'herpes zoster, che si possono fare tutto l'anno, per essere protetti per sempre. «**C'è ancora** scarsa consapevolezza delle gravi complicanze che le malattie infettive più comuni possono causare al cuore ed ai polmoni, specie in caso di malattie croniche preesistenti. Per questo bisogna fare squadra per promuovere un coinvolgimento attivo a favore delle

vaccinazioni raccomandate e gratuite per anziani e fragili. Oltre ai vaccini per difendersi dai tre avversari più temibili (influenza, polmonite da pneumococco e Herpes Zoster) non va dimenticato il richiamo decennale per tetano, difterite e pertosse, anche questi sono vaccini preziosi, inseriti nel Calendario per la Vita», spiega da parte sua l'igienista Antonio Ferro, presidente SItI.
